

Clarifeye — Living inside your collective memory

11 slides · Draft built on the new positioning. Tell me what to tweak.

Living inside your collective memory.

[Client / prospect] — [Presentation date]

SLIDE 1

01

THE SHIFT

Most AI just tours
your company.

SLIDE 2

Not the model.
|| The memory.

SLIDE 3

WHAT WE MEAN BY COLLECTIVE MEMORY

The knowledge that already
runs your business.

Documents, contracts,
regulations, technical specs

Expert reasoning, decisions,
exceptions, hard-earned
shortcuts

Processes, playbooks, schemas —
how work actually gets done

Every conversation, every
correction, every feedback loop

SLIDE 4

Why agents fail outside your memory.

They guess

Generic LLMs answer from web priors, not from your ground truth.

They forget

RAG retrieves snippets — it doesn't remember decisions.

They drift

Without a living memory, agents diverge from how the business actually operates.

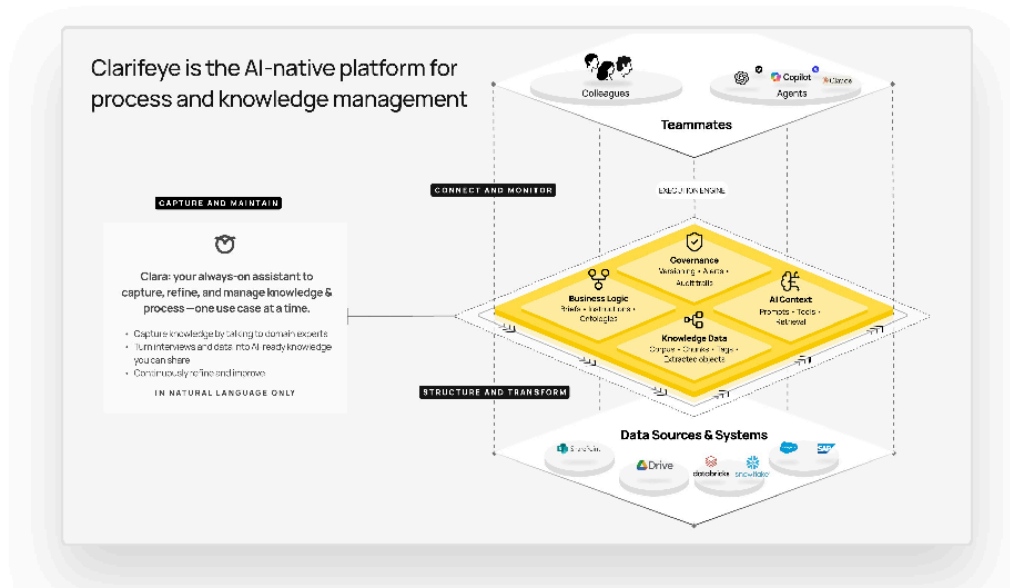

They can't be trusted

No lineage, no audit trail, no way to say where an answer came from.

SLIDE 5

WHAT CLARIFEYE IS

The platform where your collective memory lives.

SLIDE 6

Capture, structure, govern — in natural language.

Talk to your experts; their reasoning becomes structured knowledge

Turn documents and interviews into a living, queryable store

Every claim traceable to its source, every update versioned

Agents reason from this memory — not from a generic model

SLIDE 7

HOW AGENTS BEHAVE WHEN THEY LIVE IN IT

They stop guessing.
They start citing.

Grounded answers

Every response carries a verbatim citation back into the memory.

100% of answers anchored to source — no hallucinated facts

< 1 min average resolution on critical tasks

A memory that grows

Each conversation, correction and feedback becomes new knowledge.

Continuous knowledge updates from real usage, not one-shot ingestion

Versioned every change auditable, every decision rewindable

Trust by construction

Lineage, audit and governance built into the substrate.

Full audit trail who knew what, when, and on what basis

No model lock-in your memory, your data, your IP

SLIDE 8

What changes when AI moves in.

30k pages

of regulation turned into a living
memory

~1 min

average answer, vs 50–90 min
before

\$8M / yr

expert cost savings unlocked

5-10×

time-to-market acceleration

SLIDE 9

Tourist AI vs. memory-native AI.

Tourist AI

Generic priors, no business context

Forgets between sessions

Answers without sources

Drifts silently from real practice

Black box you can't audit

Clarifeye

✓ Reasons from your actual knowledge

✓ Memory grows with every interaction

✓ Every answer traceable, verbatim

✓ Stays aligned with how work is done

✓ Full lineage, full governance

SLIDE 10

Give your AI a home.
